Name: Kartikeya Mandapati

Roll No: CS22BTECH11032

12.13.1.2 Question: Compute $P(A|B)$, if $P(B) = 0.5$ and $P(A \cap B) = 0.32$.

Answer: (0.64)

Solution:

We have for two events A and B the conditional probability $\Pr(A|B)$ is,

$$\Pr(A|B) = \frac{\Pr(AB)}{\Pr(B)} \quad (1)$$

$$\Pr(A|B) = \frac{0.32}{0.5} \quad (2)$$

$$\Pr(A|B) = 0.64 \quad (3)$$
